

HV110 SANITARY VENT

The sanitary vent provides a means to release sewage gases to the exterior of the structure or outdoors through the roof. Flow of air is the primary consideration in the design of a sanitary venting system for discharge from sanitary fixtures or appliances. The greatest benefit of our vent is that it is completely integrated into the roofing system, meaning complete weather-tightness peace of mind.

The Tilcor HV110 Sanitary Vent is part of our High Performance Roofing Systems. This sanitary vent is designed to match the roof profiles and to remove the unsightly appearance and the risks associated with traditional pipe penetrations. The unique design of our roofing system means no penetration cut on the roof and no need for ancillary trades to get up on the roof after the roofer has completed the install.

It requires no further flashing, and is installed by a qualified roofer who is trained to install the weather-tight roofing system.

Unique Design

- Integrated with the Tilcor roof profiles
- Coated in the same colour as the Zinalume satin or stone-chip textured profile
- Built in protective grille to keep out debris, birds, leaves and rodents
- No more white pipes through your beautiful new roof

Superior Performance

- No penetration cut in the roof like traditional pipe vents
- No reliance on after-market over flashings, and for a silicone layer to last for years
- Installed by a qualified roofer, no need for ancillary trades to get up on the roof
- Matching flexi pipe left for the plumber to connect to in the roof space
- Integrated underlay flashing available to ensure the weather-tight integrity of the roofing system

HV110 SANITARY VENT

Easy Installation

Install easily into the roof, because the vent has been moulded to match in with the Tilcor tile profiles. There is no need for roof surface preparation, the need to fit special flashings, or mould flexible flashings by hand to fit the shape of the roof profile.

Specifications

Material	High Impact Polystyrene
Pipe fixed	Ø110mm – Flexi Pipe adaptor to fit 80mm available
Roof Pitch	15°-45°
